Keywords

EvalWorks, PowerQuote, PowerHouse, cost data, update, PowerSoft, SyncWorks

Symptom (public)

When calculating an evaluation in PowerQuote or PowerHouse, a warning message appears:

“EvalWorks cost data is out of date as of [date].”

This indicates that the EvalWorks cost data used for home and property evaluations is outdated and must be refreshed.

Problem (public)

The EvalWorks module is running an older cost data version that is no longer synchronized with the latest PowerSoft release.
This prevents evaluations from calculating using current cost information.

Common causes include:

-

Automatic updates through SyncWorks failed or did not trigger.

-

System missing scheduled update tasks.

-

The previous EvalWorks update was interrupted or incomplete.

Solution (public)

Option 1 – Manual Update (Recommended)
-

Download the latest EvalWorks Cost Data Update from:
 [1]http://jawsfiles.power-soft.com/updates/EW/ALL/EvalWorks_CostData_Update.exe

-

Save the file to your workstation.

-

Close PowerQuote or PowerHouse.

-

Run the downloaded installer and follow the prompts.

-

After installation, open PowerQuote or PowerHouse and change the effective date by one day to refresh calculations.

-

Confirm that the new cost data effective date appears (e.g., October 1, 2025).

 Result: EvalWorks has been successfully updated and synchronized with the current PowerSoft cost data.

Option 2 – Assisted Update (via PowerSoft Support)
-

Visit [2]www.power-soft.com → Support.

-

Enter your email address and Brokerage Name, then click Connect.

-

Run the LogMeIn Rescue Client when prompted.

-

A PowerSoft technician will connect remotely, update EvalWorks, and verify
that cost data is current.
